IETF-75
radext   31 jul 2009

Dynamic NAI-based peer discovery
Update

Draft status

- radext rev -00 and -01 published (moved from individual draft status)
- Includes comments from the room at IETF 74 and ML
  - Algorithm for discovery clarified; less prose
  - Example with i18n added
  - Wording changed from "DNS resolution library" to "name resolution library"
    (this more fuzzy wording is apparently more correct, according to IAB draft)
  - Fate of non-UTF-8 or improperly formatted realms: too bad for them
